

Ideation Phase

Define the Problem Statements

Date	4 September 2026
Team ID	Servicenow
Project Name	Automated Network Request Management
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Project Problem Statement:

PROBLEM
<i>How might we automate the network request management process to reduce manual work, speed up approvals, improve request assignment, and provide transparent request tracking?</i>

Selected Problem: “Manual network request processing leads to delays in submission, approval, assignment, tracking, and resolution. Therefore, an automated ServiceNow-based solution is required to manage the complete network request lifecycle.”

I am	<i>Describe the customer with 3–4 key characteristics — who are they?</i>
I'm trying to	<i>List the outcome or “job” they care about — what are they trying to achieve?</i>
But	<i>Describe the problems or barriers that get in the way — what bothers them most?</i>
Because	<i>Describe the reason the problems or barriers exist — what needs to be solved?</i>
Which makes me feel	<i>Describe the emotions from the customer's point of view — how does it impact them emotionally?</i>

Problem Statements – Automated Network Request Management

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	an employee who needs network services (e.g., new access, VPN, port change) through the Service Portal	submit a network request quickly and track it through to completion	the manual submission and approval process is slow and gives no visibility into status	there is no automated, self-service workflow with real-time tracking in place	frustrated and uncertain about when my request will be completed
PS-2	an IT administrator who configures and maintains ServiceNow workflows for network requests	ensure requests are processed accurately with minimal manual intervention and easy maintainability	manual configurations and inconsistent processes increase my workload and the risk of errors	there is no standardized, automated framework (e.g., Flow Designer-based) governing the request lifecycle	overloaded and concerned about reliability and scalability
PS-3	a member of the network fulfilment team who executes approved network changes	receive complete, accurate request details so I can act on them quickly	incomplete or inconsistent request data forces me to chase clarifications and manually create tasks	request forms are not standardized and tasks are not generated automatically	delayed and frustrated by avoidable rework
PS-4	a manager/compliance officer who approves network requests	review and approve requests quickly while ensuring policy compliance	manual, email-based approval chains are slow, hard to track, and lack a clear audit trail	there is no automated, role-based approval routing with structured logging	anxious about compliance risk and bottlenecked by manual follow-ups
